1.57 → 0.49 review comments per MR 40 → 104 merged MRs per half-year
2 → 6 tasks per sprint, median

Key work

Context for agents, not prompts

AI in engineering, day job, 2026

Wired the tracker, wiki and GitLab into the agent via my own MCP servers, wrote ~15 skills for daily chores, set up context hygiene and measured everything.

1.57 → 0.49 review comments per MR; 71% → 83% MRs with zero comments

A RAG bot over the wiki, in the team messenger

Day job, in production, 2026

A Go bot over 1,834 wiki pages and OpenAPI specs. Added golden-set evals, found a silent table bug corrupting 57% of pages, fixed silent degradation of long threads.

13 / 15 → 16 / 17 golden-set eval; 7K, answers silently degraded → 24K plus a recap on overflow context in long threads, tokens

CI: tests 2.6× faster, flaky tests in plain sight

Day job, 2026

Split tests into 5 shards with parallel_tests and fixed gem caching in the image. Moved flaky-test detection into a shared CI component used by 12 Ruby services.

~12.5 min → ~4.5 min tests in the pipeline; ~13 min → ~3 min image build on repeat runs

“Review 540”: performance reviews out of Excel

Side project, B2B SaaS, 16 days

Moved a 540° review methodology from Excel into a Go and React B2B service in 16 days: HMAC pseudonymization, multi-tenancy, 94 MCP tools, mutation testing.

hand-made Excel formulas → Excel reference locked in a regression test scoring; 65 / 82 → 80 / 80 mutants killed in scoring

“Svod”: documents where styling lives in the template

Side project, closed beta, svod.webtm.ru

A document editor where styling lives in the template. One AST and one renderer for PDF, DOCX, HTML and Markdown. 43 MCP tools: an agent turns a Word contract into a template.

in every paragraph → in one template formatting; 214 → fixed in waves audit findings (19 dimensions)

A tracker MCP and agent-driven defect analysis

Day job, 2025–2026

A 22-tool MCP server for the tracker and wiki, listed in the company marketplace. Agent-driven defect analysis with deterministic steps moved into scripts.

by hand, quarterly → ~\$0.17 per 24 tasks defect analysis; ~55K → ~30K tokens per analysis

Open source: provenance and database-seed-cli

My own libraries, Ruby and Go, 2026

provenance, an audit gem for Rails, 450 downloads. database-seed-cli in Go, a consistent data generator for PostgreSQL, tested on databases with up to 417 tables.

rewritten in every service → gem "provenance" auditing in a Rails app; prod dump or by hand → ~82K rows, zero manual edits dev data

Experience

Nov 2023 – now

Senior Backend Engineer, Lead Software Engineer, цифровая лаборатория

An education platform, ~30 services in Ruby on Rails and Go, Kafka, PostgreSQL with replicas, k8s. 427 resolved tasks, 346 MRs, third by commits of 59 authors in the main service. Code review and mentoring.

Aug 2020 – Nov 2023

Full-stack Developer, спейс

Client projects; a year in, mentor on the largest one: estimates and requirements together with the PM. Later a product team and backend mentoring for the mobile team.

Feb 2022 – Jun 2023

Lecturer, alongside the main job, Шапара

Databases, information systems, operating systems. Coached students for championships and hackathons.

Oct 2022 – Dec 2022	Instructor, Онлайн Университет Git, programming basics, database design.
Dec 2019 – Aug 2020	Technician, КисКис My first Ruby on Rails service, a support desk with server-side rendering.

Tools

Core	Ruby on Rails, Go, PostgreSQL, Kafka, Redis, REST, GraphQL
Infra	Docker, Kubernetes, GitLab CI, MinIO, OpenSearch, Grafana
Frontend when needed	TypeScript, React
AI at work	Claude Code, custom MCP servers and skills, RAG, evals

Education

2021–2025	Национальный исследовательский университет «Шеи» Institute of Radio Engineering and Electronics
2016–2021	ESEDU Computer Science and Engineering
